01 Pre-development phase

NEEDS

The needs and challenges of a nature-based project vary according to the stage of its lifecycle.

At the Pre-development phase project developers need to:

- Define project feasibility, objectives, scope, and stakeholders to enable Project Development Document (PDD) Design
- Lay the groundwork for the project's success by clearly outlining goals and expectations.
- Collect information and implement the project plan to achieve project validation.
- Allocate resources efficiently, and ensure effective communication among team members to stay on track.

BARRIERS

Some of the most common challenges you might encounter in this phase are:

Site Understanding
Determining the best options and potential of your project with only a region and a boundary file can be difficult.

Stakeholder Priority & Timeline Management
Keeping multiple stakeholders (governments, partners, landowners, investors) aligned and engaged, despite their varying priorities and timelines, can be challenging and may affect the project's success.

PDD Writing & Submission
Increasing scrutiny in voluntary markets and stricter changing standards make obtaining project verification and validation harder and longer.

See our overview of project lifecycle stages and our assessment offerings for each.

Pre-development Monitoring Package

All your data needs for getting your project started

Why a package

At Treeconomy, we understand the unique challenges of starting a nature-based project. With deep VCM and NbS expertise, we'll assist you in gathering, analysing, and sharing the necessary data to define your project scope, submit a PDD, and keep stakeholders informed and engaged.

This is why we created the pre-development package featuring three essential assessments designed to deliver the data analytics and insights crucial for the successful start of your project.

What's included

Project Site Eligibility Assessment

How it helps
Identify eligible sites in your area of interest for developing standard-aligned carbon projects using historic land-use and vegetation health data.

Outputs: Map of eligible areas within the area of interest, size of the eligible area, detailed eligibility criteria and all the supporting data, including changes in land use, land cover, deforestation and vegetation

+

Carbon Projection Assessment

How it helps
Calculate your site's potential carbon performance and credit yield when developing a carbon project. It takes into account different planting scenarios and forest archetypes.

Outputs: Table and graphs of carbon curves under a range of planting scenarios with an average expected carbon yield
+

Dynamic Performance Benchmarking Assessment

How it helps
Prepare your project for standard validation by selecting benchmarking sites following standard methodology. The results provide the traceability and transparency needed for third-party verification.

Outputs: Maps and data of the selected project and reference sites with their categorical values and stocking index in time. A comprehensive PDF report with the results and methodology to use for standard validation

Unlock Your Pre-Development Phase with Our Package

BENEFITS OF CHOOSING OUR PACKAGE

Assurance and Speed: Our assessments provide rapid and reliable data, ensuring you can move forward quickly and confidently.

Ease and Low-Cost: Simplify your project commencement with our cost-effective solutions, designed to provide clear, actionable insights.

Future-Proof Solutions: Stay ahead with scientifically backed assessments that ensure your project not only meets but exceeds evolving carbon standards and regulatory requirements.

Comprehensive Insights: Gain detailed metrics, site maps, and historical land-use data to fully understand your site's eligibility and potential.

Aligned with VM0047: we assist in identifying eligible areas in line with Verra's newest ARR methodology.

SELL YOUR CARBON CREDITS WITH US

The pre-development monitoring package is a requirement for listing projects in our premium marketplace. If your project meets our criteria, you can request to have it included.

Enquire about listing your project in Treeconomy's marketplace.

OUR MARKETPLACE OFFERS

access to buyers of premium priced carbon removal credits

financing through innovative long-term contracts

comprehensive support, & preparation in securing project financing

Do you have a question?

Please don't hesitate to contact us if you'd like to schedule a consultation about your project and our assessment options.
